

Austrian Aviation Technology Days „Safe Flight! – Digitalization & beyond“

Fachpanel „Environment & Human Factors“ Impuls Talk: Human Factors in Air Traffic Management

Dr. Michaela Schwarz

Austro Control Safety, Security & Quality Management

Integrated Management Systems / Human Factors

V1 10.10.2018

SAFETY IS IN THE AIR

Speaker Profile

Academic Title Dr. rer. nat.
Name Michaela Schwarz

Education • Doctoral Degree in Organisational Psychology and Human Factors

Relevant Licences • Aviation Psychologist (www.eaap.net)
• Just Culture Trainer (<https://www.justculture.org/>)
• CISM Basic Course Instructor (www.icisf.org)

Current Position: • Senior Expert Integrated Management Systems /Human Factors
Previous Employment: • Qantas Airways - Senior Adviser Human Factors
• Open Solutions/ EUROCONTROL – Human Factors Adviser

Relevant international projects • EUROCONTROL/ FAA Human Performance Standard of Excellence
• SESAR/ NORACON 16.06.01.2b Application of Resilience Engineering Guidance to Multiple Remote Tower (MRTWR)
• SESAR/ NORACON 16.01.02 Resilience Guidance Material for Safety Reference Material

Associations • President of European Association for Aviation Psychology (President)
• Austrian Aviation Psychology Association (Vice-Chair)
• International Critical Incident Stress Foundation (Certified Trainer)
• Berufsverband Österreichischer Psychologen (Member)

HUMAN FACTORS IN AIR TRAFFIC MANAGEMENT

Human Performance in ATM

Human Performance =
all **job-related factors** at individual,
group and organizational level

Human Factors =
discipline applying **scientific
knowledge to optimize well-being
and system performance.**

(EUROCONTROL/FAA (2015). A Human
Performance Standard of Excellence.)

Non-technical skills =
the **mental, social, and personal-
management abilities** that
complement the technical skills of
workers and contribute to safe and
effective performance in complex
work systems.

(CASA (2011). Non-Technical Skills Training and
Assessment for Regular Public Transport
Operations, CASA CAAP SMS-3(1))

≠ Human Resource/ People
Management:
a strategic approach to the
management of an organisation's
most important assets – the people
working there.

≠ Human Capital Management:
an approach to obtaining, analyzing
and reporting on data which informs
the direction of value-adding people
management)

≠ Personnel Management:
obtaining, organizing and
motivating human resources

(Armstrong, M. (2006). A Handbook of Human
Resource Management Practice, 10th Edition.)

Human Performance Management- The Human-System-Interface

1. Human/Person

→ help people to detect and respond to errors

Source: Swiss Freddy Nock walking a tightrope at Zugspitze (Germany)

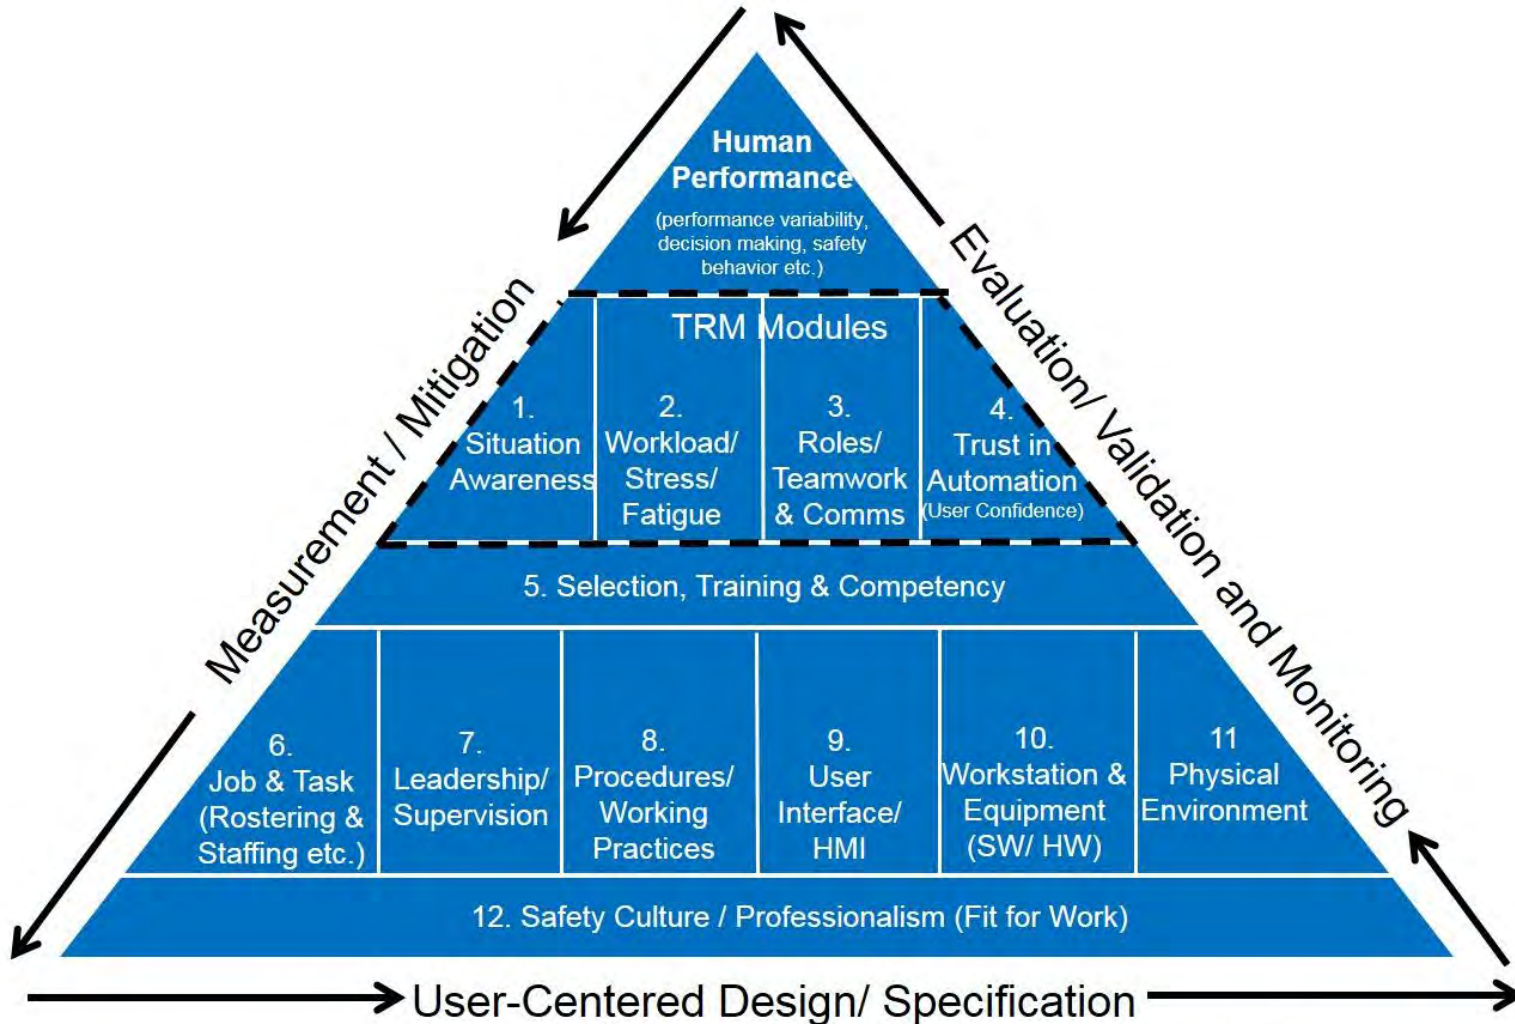

2. System

→ build error tolerant systems (trap, manage and defend against error causes)

Source: Standard safety net

Human Performance Assurance @ Austro Control More than the “dirty dozen”

Source: Adapted from UK NATS Human Factors Triangle (2012)

in line with EUROCONTROL Common Core Content/ Team Resource Management (TRM) Requirements (2008/2009)

10 Levels of Automation (Sheridan & Verplank, 1978)

Level	Description
1	Computer offers no assistance, human must take all decisions/actions.
2	The computer offers a complete set of decision/action alternatives, or
3	Narrows the selection down to a few, or
4	Suggests one alternative, and
5	Executes that suggestion if the human approves, or
6	Allows the human a restricted veto time before automatic execution
7	Executes automatically, then necessarily informs the human, and
8	Informs the human only if asked, or
9	Informs the human only if it, the computer, decides to
10	The computer decides everything, acts autonomously, ignores the human

Thomas B. Sheridan

William (Bill) L. Verplank

Example 1: From paper strips to electronic flight strips

Example 2a. From regular tower to remote tower

Sundsvall Tower (2014)

Sundsvall Remote Tower Centre (2018)

Example 2b. Multiple remote tower

Source: Sundsvall remote tower centre (Sundsvall ESNN & Örnsköldsvik ESNO)

Example 3. Automated Safety Monitoring (Big data)

Source: EUROCONTROL ASMT User Forum April 2018

Example 3

Automated Safety Monitoring

- ▶ developed by EUROCONTROL
- ▶ used for recording of safety-related events by using radar track data, flight plans and ATC system alert messages (STCA, AIW, MTCD etc.)
- ▶ modules include automatic detection of:
 - separation minima infringements (proximity between aircraft)
 - aircraft that do not comply with cleared levels (altitude deviation)
 - unauthorised penetration of segregated airspace
 - Infringements of vertical and horizontal distances (rate of closure)
- ▶ Analytics/statistics:
 - Geographical/ density maps of occurrences (hot spots)
 - Time-based series & trends
 - Correlations between metrics
- ▶ Main challenges:
 - Data quality/ integration in local ATC systems
 - Interpretation of data
 - Potential misuse of data (just culture)

CONCLUSIONS

- ▶ Automation is the prerequisite for digitalisation.
- ▶ Technology is fascinating, but ...
- ▶ ... the human operator still remains at the heart of the ATM system.
- ▶ Human aspects should be considered to get the user's buy-in.
- ▶ Trust into automation / digital data/ processes is an issue.
- ▶ Over-reliance on automation is an-issue/ false sense of control.
- ▶ Automation/ digitalisation is complex.
- ▶ If designed right, it can enhance human performance, but ...

... what do you think?

Thank you for your attention!
